

NOW AVAILABLE – Touchless MFP Operation with the Canon PRINT Business App

With the goal of working more efficiently and safely, customers are looking for ways to continue leveraging their office multifunction printers while, at the same time, minimizing touchpoints.

Introducing Remote Operation – now available with the free Canon PRINT Business app. This feature allows users to control the imageRUNNER ADVANCE user interface from a compatible smartphone or tablet without having to touch the shared control panel. The user interface on the MFP control panel is replicated on and operable from the mobile device, in real time and for any device function.

This new feature adds to the existing capabilities native to the app, including printing from and scanning to the mobile device and cloud storage locations*.

**Subscription to a 3rd party cloud service required).*
